APHEX SYSTEMS HELPS TO CREATE A COMPELLING BEIJING SUMMER GAMES

SUN VALLEY, CA (June 25, 2008) – The Beijing Summer Games will be broadcast to the world this summer with excellent audio quality, thanks in part to the 33 Aphex Model 320A Compellers® that have been supplied by Voci Dorate, Aphex' distributor in China.

“We are thrilled that the world’s greatest sporting stage will make use of our Compellers,” says Marvin Caesar, Aphex President. “While we’ve continued to make improvements to the original Compellor design, such as the implementation of digital interfacing in the Model 320D, no other dynamics processor to date offers its winning combination of simultaneous intelligent compressor action, leveling and peak limiting.”

As has been the case in previous years, many different sites will be hosting various events in this summer’s Beijing games, from scattered locations such as Qinhuangdao, Shanghai, Shenyang, Tianjin, Qingdao, and even the separate jurisdiction of Hong Kong. The Aphex Compellers will be used for consistency of the myriad of broadcast feeds from the 33 different sites that host 302 events in 28 different sports.

INFOCOMM 2008: APHEX COMPELLORS TAPPED FOR BEIJING GAMES

Page 2

The Aphex Compellor is an intelligent, versatile and highly affordable processor that can be used to solve audio level problems and improve audio signals in the broadcast studio, recording studio, duplication house, film dubbing studio and in live sound applications. Patented control circuits include analog computers that continuously analyze the input signal and vary the control characteristics to provide for virtually undetectable operation, regardless of the dynamics of the program.

Extremely easy to use, the Compellor can be operated merely by setting the Drive level to generate the desired amount of processing, the Process Balance control between Leveling and Compression, and the Output level for unity gain. The Compellor is then ready to provide complete dynamic control - smooth, inaudible compression, increased system gain, desired program density and the freedom from constant "gain riding" - fully automatically. Its unique circuit design actually enhances transient qualities, thus making even heavy processing undetectable. The Compellor technology is available in three different Aphex products: the Model 320A, the Model 320D (with digital inputs and outputs) and the Model 323A which adds the Aphex Aural Exciter for intelligibility and clarity along with compression.

More information on the Compellor is available at aphex.com.

About Aphex Systems

Founded in 1975, Aphex Systems is the leading developer and innovator of signal-processing, dynamics control, microphone preamplifiers and analog-to-digital conversion systems. Aphex products are designed for a wide cross section of professional end users around the world. For more information call 818/767-2929 or visit www.aphex.com.
